PROJECTS

OnWoodByPatelis

- Designed and developed a WordPress site/application for a furniture creation, design, and restoration company.
- Implemented e-commerce functionality, enabling customers to browse and purchase products online.
- Optimized the site for SEO and performance, ensuring high visibility and fast load times.

Time-series Visualization

- Developed an interactive visualization tool for time-series data using JavaScript and Vue, optimizing performance for large datasets and providing a smooth user experience.
- Implemented responsive design with Tailwind, ensuring usability across different devices.
- Integrated data fetching from APIs to dynamically update the visualization.

Weather Widget

- Created a real-time weather widget using JavaScript and Vue, displaying current weather data fetched from an external API.
- Styled the widget using Tailwind for a modern, clean user interface.
- Ensured the widget is fully responsive and functional on various screen sizes.
